Risk Systems Development Service

Risks system development can be undertaken in any area including: HSE, Business, Project, SWRM (site wide) or EWRM (enterprise wide) risk management. Examples of the types of services we can assist with are listed below:

Risk auditing services: Use auditing techniques to audit the risk management system or some aspects of the system to provide client organisations with valid and independent information that will enable improvement (see *Auditing*, Page 13 for more information).

Risk culture development: Use facilitative consulting techniques to assist organisations to identify their existing risk culture, their required risk culture and develop ways to build the required culture.

Risk management plan capability development: Use facilitative consulting techniques to assist organisations to develop a risk management plan and/or to develop the capability to effectively develop risk management plans in the future.

Risk management system establishment: Use facilitative consulting techniques to assist organisations to develop a risk management system.

Risk monitoring development: Use facilitative consulting techniques to assist organisations to develop the capability to effectively undertake risk monitoring and surveillance.

Risk pitfalls assessment: Use informal and quick facilitative techniques to identify pitfalls within the existing risk framework or system.

Risk policy development: Use facilitative consulting techniques to assist senior management to formulate an effective risk policy.

Risk procedure development: Use facilitative consulting techniques to assist organisations to develop and document procedures for risk processes.

Risk organisational structure development: Use facilitative consulting techniques to assist senior management to formulate an organisational structure for risk with roles and competencies defined.

Risk standards development: Use facilitative consulting techniques to assist management to formulate effective risk standards.

Risk strategy development: Use facilitative consulting techniques to assist senior management to formulate the best way to use and align risk initiatives to the organisations vision, mission and strategy.
